

Python Topic-wise Interview Questions & Answers Handbook

This handbook contains topic-wise Python interview logic building questions with answers for fresher candidates.

List & Dictionary

Q1. Remove Duplicates from List

```
arr = [1,2,2,3,4,4]
unique = []
for i in arr:
    if i not in unique:
        unique.append(i)
print(unique)
```

Q2. Dictionary Character Count

```
text = "python"
freq = {}
for ch in text:
    freq[ch] = freq.get(ch, 0) + 1
print(freq)
```

Loops & Conditions

Q3. Check Even or Odd

```
num = int(input())
if num % 2 == 0:
    print("Even")
else:
    print("Odd")
```

Q4. Print Pattern

```
for i in range(1, 6):
    print("*" * i)
```

Functions

Q5. Simple Function

```
def greet():
    print("Hello Student")
```

```
greet()
```

Q6. Function with Return

```
def add(a, b):  
    return a + b  
  
print(add(10, 20))
```

Recursion

Q7. Factorial Using Recursion

```
def factorial(n):  
    if n == 1:  
        return 1  
  
    return n * factorial(n - 1)  
  
print(factorial(5))
```

Q8. Recursive Fibonacci

```
def fib(n):  
    if n <= 1:  
        return n  
  
    return fib(n-1) + fib(n-2)  
  
for i in range(6):  
    print(fib(i))
```

File Handling

Q9. Write into File

```
file = open("demo.txt", "w")  
file.write("Hello Python")  
file.close()
```

Q10. Read File

```
file = open("demo.txt", "r")  
data = file.read()  
print(data)  
file.close()
```

Exception Handling

Q11. Handle Division Error

```
try:
    a = 10 / 0
except ZeroDivisionError:
    print("Cannot divide by zero")
```

Q12. Multiple Exceptions

```
try:
    num = int(input())
    print(10 / num)

except ValueError:
    print("Invalid Input")

except ZeroDivisionError:
    print("Zero not allowed")
```

OOP Concepts

Q13. Class and Object

```
class Student:

    def __init__(self, name):
        self.name = name

    def display(self):
        print(self.name)

s1 = Student("Rahul")

s1.display()
```

Q14. Inheritance Example

```
class Parent:

    def show(self):
        print("Parent Class")

class Child(Parent):
    pass

c = Child()

c.show()
```

Sorting & Searching

Q15. Bubble Sort

```
arr = [5,2,8,1]

for i in range(len(arr)):
    for j in range(len(arr)-i-1):

        if arr[j] > arr[j+1]:
            arr[j], arr[j+1] = arr[j+1], arr[j]

print(arr)
```

Q16. Linear Search

```
arr = [10,20,30,40]

search = 30

for i in arr:

    if i == search:
        print("Found")
        break
```

Most Important Python Topics for Freshers
